

Insul-Jac™ 2-Piece Aluminum Elbow Covers

Description

VMSI Insul-Jac™ 2-Piece Aluminum Elbow Covers are precision formed to provide effective weatherproofing and mechanical protection over 45° and 90° insulated elbows. They are formed from .024" thick 1100 Aluminum alloy with moisture barrier protection on the interior surface and a baked-on clear-coating on the exterior.

The clear-coated exterior surface provides enhanced resistance to oxidation, fading, chalking, or other forms of deterioration due to weathering and exposure to corrosive environments.

Insul-Jac™ Elbows are produced in compliance with ASTM C1729 from 1100 Aluminum alloy conforming to chemical and physical property requirements defined by ASTM B209.

Applications:

Insul-Jac Elbows are designed to fit 45° and 90° insulated elbows. 90° Insul-Jacs™ can be applied over both Long Radius and Short Radius 90° elbows. Sizes range from ½" through 12" pipe diameters with up to 4" thick insulation on most sizes.

MATERIAL:

- 1100 Aluminum alloy

SIZES:

- ½" through 12" Pipe diameters
- 90° and 45°
- Long or short radius
